TRUDEAU ADOPTING CHINESE COMMUNIST POLICY?

Have you heard of 30x30—The Plan That Threatens Private Property Ownership

Canada is known the world over for its natural beauty. Each year, millions of people from every country on Earth visit our national or provincial parks.

The Communists who control China are known as international environmental criminals. Communist China is the largest polluter on the planet. Naturally, the Trudeau Liberals thought this Communist Party would be the perfect partner to lead the world in drafting an international agreement to protect the environment.

The Trudeau Liberals and the Chinese Communist Party worked closely with the United Nations to establish the Kunming-Montreal Global Biodiversity Framework. Last Christmas, while most Canadians were busy with last minute preparations, Envirocrats were meeting in Montreal. On December 22, 2022, the final agreement was reached.

The Kunming-Montreal Global Biodiversity Framework creates 23 targets to be completed in the next seven years, but it is the first three which have Canadians worried.

Target 1 calls for the end of all biodiversity loss by ensuring all land and water fall under “integrated biodiversity inclusive spatial planning and/or effective management processes”. Translated from enviro-speak, this means all land and water in Canada must be covered by a Conservation Authority of some type.

Target 2 calls for restoring 30% of “degraded” land to a natural state. What the Enviro-crats mean by “degraded” is land used by humans, such as for roads, farms, and homes.

Target 3 has been the one to attract the most attention from the media. It calls for protecting 30% of Canada’s ecologically pristine land and water by 2030.

(Fig. 1: Canada and China joined together to establish UN Biodiversity Framework in Montreal—December 2022)

Trudeau’s goal of protecting 30% of Canada’s ecologically pristine land and water by 2030 is based on a slogan:

“30 by 30” or “#30x30”

This has nothing to do with science, evidence, or ecology. This is Trudeau’s slogan for land conservation, electric vehicle uptake, livestock methane release, carbon reductions, and nitrogen emissions.

In 2015, Trudeau said his goal was to protect 17% of Canada’s land and water by 2020. As of 2021, 13.9% of Canada is protected, which is only 3.4% more than in 2015.

After seven years, Trudeau could only reach half his own goal. Having learned no lessons, he is now committing to conserve four times as much in the next seven years.

Should Canadians be concerned that Trudeau’s environmental ambitions are tied to a country that has been interfering in our elections?

Canada helps lead the world to agreement on the monumental Kunming-Montréal Global Biodiversity Framework

From: Environment and Climate Change Canada

News release

December 20, 2022 - Montréal, Quebec

Canada along with the other 195 member nations have wrapped up negotiations at the 15th meeting of the Conference of the Parties (COP15) to the United Nations Convention on Biological Diversity in Montréal. After 13 days of negotiations at the largest ever conference for biodiversity conservation, Parties at COP15 in Montréal agreed on a historic global framework to safeguard nature and halt and reverse biodiversity loss, putting nature on a path to recovery by 2050.

The Honourable Steven Guilbeault, Minister of Environment and Climate Change and Minister responsible for Parks Canada, worked tirelessly with international colleagues on the Kunming-Montréal Global Biodiversity Framework. Among Canada's main goals were protecting 30% of lands and waters by 2030, respecting the rights and roles of Indigenous peoples, and addressing the key drivers of biodiversity loss, such as pollution and overexploitation of nature. These elements were agreed upon in the final Framework.

(Fig. 2: Government of Canada news release.)

Now you might be thinking this is all conjecture and hypothesis. But this Liberal government is serious. Above is their official press release highlighting this agreement and commitments.

Don't forget—while the Liberals make lots of promises and rarely see them through—using the environment as a way to bring in various forms of social engineering has been a key priority. Think Carbon Tax.

Further, the Minister assigned to this, the Hon. Steven Guilbeault, Minister of Environment and Climate Change, has been so committed to this cause in the past, he has been willing to break the law to accomplish his goals.

Steven Guilbeault @s_guilbeault · May 25
At the FPT meeting to advance priorities with provincial and territorial counterparts and invite them to join the federal government's efforts to protect 30 % of land and water by 2030. #30x30

(Fig. 3: Guilbeault highlighting #30x30)

While much of the media attention has focused on Trudeau's promise to protect 30% of Canada's natural habitat by 2030, it is actually Target 2, which should alarm every landowner and taxpayer.

The goal of Target 2 is to restore 30% of land currently being used by humans.

The World Wildlife Foundation (WWF) recently completed a study to identify areas most suitable for restoration. It identified Canada as having 50 million hectares of "degraded" land.

When this Trudeau-linked organization says it wants the federal government to seize 30% of land currently used by humans—believe them.

To achieve a 30% restoration would require 15 million hectares, or the equivalent of 234 Toronto's worth of land.

(Fig. 4: Projection of Canada with 30% of natural habitat conserved)

This is not remote land, or wilderness. These are among the most agriculturally productive areas in Canada, not to mention the most expensive land in Canada.

Some may doubt such a vast expanse of privately held land would even become available for sale. However, combined with Trudeau's plan to reduce emissions from fertilizer, the plan becomes clear.

The Liberals will make farming so uneconomical, and bankrupt so many families, leaving the government free to snap up land at fire-sale prices.

While farmers will feel particularly targeted by Trudeau's plans, every single landowner in Canada, whether rural, suburban or urban, is going to be impacted by Target 1 of the Liberal-Communist plan which seeks to regulate all land through Conservation Authority-type regulations.

Canadians currently living under Conservation Authorities can testify to the bureaucratic nightmares which come when making minor alterations to the property they own. This will be the model replicated across the country. Every Canadian will effectively be living under the regulatory power of a new class of Environmental bureaucrats.

Conservatives will always stand up for famers and ranchers. We will use technology, not bureaucracy, to conserve our country's environment and natural beauty. A Conservative government led by Pierre Poilievre will quickly approve Canada's clean LNG projects for export.
